Typical identification signs

Application Area

This compact pocket-sized tool is suitable for a variety of uses such as centre marking, identification stamping, numbering and process control marking. The impact force is steplessly adjustable by turning the end cap which sets the preload on the impact spring. The punch is capable of exerting relatively high impact forces and operates without any recoil.

The centre-mark tool and the wide variety of other marking tools are easily and quickly interchangeable, offering increased flexibility and efficiency of workpiece identification.

Various stamp tool engravings are available as well as numbers 0 - 9 and capital letters A - Z. These may be supplied ex stock in character height 2,5 mm. Other special engravings are also available on request.
